BEES IN DECLINE GREENPEACE

Dec 01, 2020

[Bees In Decline Greenpeace](#)

Bees and other pollinators – both in the wild, and managed – seem to be declining globally, particularly in North America and Europe. In recent winters, honeybee colony mortality in Europe has averaged around 20%. No single factor can be blamed for the overall global decline in bee populations, or in their overall health. This decline is undoubtedly the product of multiple factors, both known and unknown, acting singly or in combination. Nonetheless, the most important factors affecting ...

A Greenpeace scientific report identifies seven priority bee-killer pesticides—including the three nicotine culprits—plus clorpyrifos, cypermethrin, deltamethrin, and fipronil. The three neonicotinoids act on insect nervous systems. They accumulate in individual bees and within entire colonies, including the honey that bees feed to infant larvae. Bees that do not die outright, experience sub-lethal systemic effects, development defects, weakness, and loss of orientation. The die-off ...

Greenpeace has recently published a review of the factors thought to be contributing to the marked decline in honey bee and wild pollinator populations (Tirado et al. 2013). As the report Bees in Decline makes clear, the observed overall global decline in bee populations and in their health cannot be attributed to any single factor. Much of the ...

Since the late 1990's bees have been in decline due to loss of habitat and the use of pesticides. No bees means no honey and less food. So to emphasize the importance and contributions that honey bees make we celebrate National Honey Bee Day today. Our archive pictures show what we aim to preserve and document what's at stake. Recently, the UK government authorised the use of banned bee ...

[The extinction of the honey bee](#)

Cause of the bee decline A toxic mix of pesticides and fungicides in pollen lowers the bee's resistance to a parasite. Scientists found the reason why bees were dying in huge amounts was due to Colony Collapse Disorder (CCD), according to Quartz. CCD is when a majority of the worker bees in a colony die off, leaving behind the queen and immature bees. Quartz reports that CCD was responsible ...
