This book has some advice on computer specs and what to look for when buying a computer. It covered the insides ram, cpu and has lots of photographs to show inside the computer. It tries to explain the technical concepts in as little technical language as possible, not always easy with a technical subject. It helped me to understand some of the hardware terms and internet wifi, fiber or dsl and what they are. Nice little reference to keep handy.

Why do I need to learn about Computer Security? Isn't this just an IT problem? Good Security Standards follow the "90 / 10" Rule: 90% of security safeguards rely on an individual ("YOU") to adhere to good computing practices; 10% of security safeguards are technical. Example: The lock on the door is the 10%. You remembering to lock the lock, checking to see if the door is closed, ensuring ...
